

Flexible Email Security. Your Weapon: Sunbelt Ninja Email Security.

Ninja Email Security is an advanced and powerful, policy-based email security product that provides you as a system administrator the weapon to enforce email policies that protect your network against spam, phishing, viruses and other messaging security threats.

Ninja provides a layered security approach for email inspection, cleansing and management. By using multiple scanning engines for antispam and antivirus, while integrating other email security rules, all treatment of messages occurs at the server, not at your end-users' workstations – no client software needed.

Policy-based plug-in management.

Ninja's plug-in architecture was designed with flexibility and extensibility in mind. That way you get a robust product that enables you to manage your entire email security. You can create customizable policies utilizing Ninja's integrated plug-in management. Ninja includes plug-ins for antispam, antivirus, attachment filtering, and disclaimers. The architecture is built to accommodate the integration of additional plug-ins in the future which will include content filtering, archiving, content auditing, and more.

Ninja's default plug-in policies and have a powerful messaging protection solution in place in just a few minutes.

You can also create separate policy templates for different groups or individuals. And, you don't have to set up and maintain lists of blocked IP addresses and constantly create all sorts of custom rules. You have the flexibility to fine tune the aggressiveness of detection for all messaging plug-ins.

filters attachments at the Exchange server, before they reach your users and as they are sent between users.

Server-based enterprise antispam filtering.

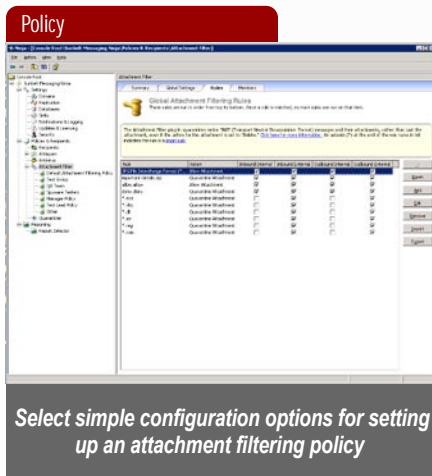

For its antispam capabilities, Ninja includes Cloudmark's™ antispam engine, Sunbelt's own antispam engine and support for Real-time Blackhole Lists (RBLs). This plug-in delivers superior spam detection against both standard and image spam using heuristic functionality and spam signature technology. Ninja can be configured to delete, centrally quarantine, add Subject line identification, or send to a custom folder in the end-user's Exchange mailbox.

Fast deployment in Exchange 2000/2003 environments.

Ninja's management console enables you to install, configure and manage your full messaging security from one central location. Designed as an MMC snap-in, deployment is simple with a minimum of configuration effort needed. Ninja seamlessly integrates with Microsoft® Exchange and provides world-class spam, virus, file attachment protection, and disclaimers. Additionally, Ninja makes it easy to create policies across multiple messaging plug-ins.

Multiple scanning engines for higher detection and protection.

Ninja is designed to meet both the spam and virus protection needs of your organization. With multiple spam and virus scanning engines, you automatically receive higher detection rates and a more accurate response to the messaging threats that attempt to enter your network. As an integrated email content inspection, antispam and antivirus solution, Ninja not only scans and eliminates viruses and other dangerous message content, but also

With extensive policy creation capabilities, you can create custom policies for groups of users or a single user using Active Directory. You can set parameters based on user and/or organizational requirements. If you wish, you can simply associate all users with

When you first launch Ninja you get an at-a-glance view of your messaging traffic
